🎓 Education

BASc Computer Engineering

University of Toronto, St. George Campus

2017 – 2021

Toronto, ON

- Co-Curricular Activities: Vice President of Social and Outreach with Engineers Without Borders, Orientation Week Head First Aid Patroller, Chestnut Residence Gym Squad

🔧 Experience

Machine Learning Research Intern

National University of Singapore

May 2019 – July 2019

Singapore

- Developed an application with a **PyQt GUI** to classify medication from webcam video
- Used **OpenCV** to identify pills from a screen and K-Means clustering with **Scikit-Learn** to extract HSV value
- Queried a **MySQL** database to insert, classify and remove pills and their corresponding information
- Additionally trained a CNN built with TensorFlow to recognize 6 pills, achieving **97% accuracy** on test set
- App recognized 6 stored pills with a 93% accuracy under good lighting, and 68% under poor lighting

Computer Vision Developer

Autonomous Rover Team, University of Toronto Robotics Association

Jun. 2019 – Present

Toronto, ON

- Implemented line detection algorithm to detect lanes on a live video feed with **OpenCV** in Python
- Used Gaussian blurring and thresholding to reduce noise on a binary image
- Worked with YOLO object detection to detect various obstacles in the path of the rover

First Aid and Swim Instructor Supervisor/Lifeguard/Camp Counselor

Bowview Outdoor Pool, Vivo For Healthier Generations, Hart House

Sept. 2016 - August 2018

Calgary, AB

- Provided unique and engaging lessons for swimmers aged 0 to 75 and supervised instructor development
- With a team, handled major and minor first aid, enforced rules and managed public relations

🏠 Projects

Grash - Hack The North 2019 Winner

Winner of the TD DaVinci API Challenge, \$2000 Awarded To Team

Python, Flask, Azure OCR, MySQL

Waterloo, ON

- As back-end developer, built an app to provide university students with advice about the economic and environmental sustainability of their purchase decisions
- Used **Azure** Optical Character Recognition and Python to retrieve and analyze grocery data from a receipt
- Deployed a **RESTful API** server with **Flask**, receiving image data and POSTing data to the front-end

Onion GIS Map Application

Worked in a team to program a Google Maps GIS application in C++, collaborating with Git

C++, GTK, Libcurl

- Implemented **Dijkstra's** algorithm to find path between intersections, optimized algorithm by 50%
- Displayed live weather data using Dark Sky API, retrieving information with Libcurl web scraper

Robot-Sumo Competition

As embedded lead, coordinated a team to design a sumo-bot making motors respond to line sensor and ultrasonic sensor input

Arduino

- Soldered components onto PCB as well as built the body of the robot with power tools.

⚙️ Skills

Languages C, C++, Python, SQL, HTML, CSS, JavaScript, MATLAB

Libraries and Frameworks Qt, GTK, TensorFlow, Scikit-Learn, OpenCV, Numpy, Matplotlib, Flask

Hardware Verilog, ARM Assembly, Simulink, Arduino
